*Since Launch: Launch of PMS Portfolio 01/11/2008

Source of Data:  **ANALYTICS**
BE BETTER INFORMED

The past performance figures above in the bold grey highlighted column is actual data from our MPS. The other data figures are from the Portfolio Management Service (PMS) provided by IBOSS Limited. The same model portfolios/data has been used for IBOSS Asset Management Limited's discretionary offering, the Managed Portfolio Service (MPS), but with different share classes. The simulated past performance is not a reliable indicator of future performance.

For Professional Financial Advisers use only.

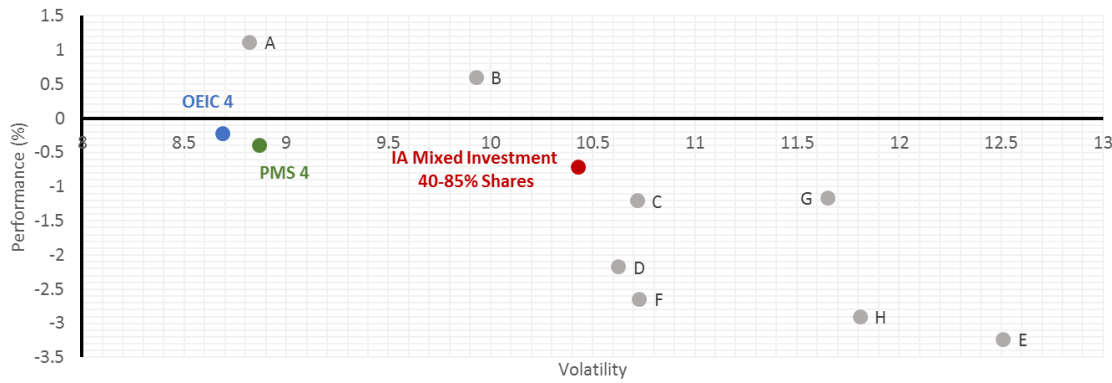

SUMMARY

All the MPS funds beat their respective benchmarks with the exception of portfolios 0 and 1. The average outperformance was circa 10 bps with the best relative returns coming from our higher risk portfolios. This outperformance is perhaps not surprising given our relative defensive stance, over what was a negative month for all the multi asset sectors. The principle reason 0 and 1 underperformed was our underweight Gilt position. We have increased our Gilt holdings recently and introduced an index-linked Gilt fund, but even with what is now a smaller underweight position, the magnitude of Gilt's appreciation in May was considerable. As an example, the 10 Year yield fell from 1.17% at the end of April to 0.88% at the end of May. The reason we remain cautious on Gilts is the political uncertainty surrounding UK politics, which has been brought into sharp focus by Brexit, the Tories hunt for a new leader and the widespread market fears of the implications of a Corbyn led government. That said, for the time being at least, UK Gilts are attracting investment as are much of the world's sovereign debt markets. The reasons are primarily because May brought a search for safety, as equity markets fell on Trump's escalating and 'whack-a-mole' approach to global trade wars. Towards the end of the month, uncertainty around the effectiveness of Chinese stimulus added to the fears of Trump's unique methods of negotiation, yielding unsatisfactory economic results. Against this very uncertain backdrop we have generally maintained our bond exposure, but we still have a heavier bias to sovereign over corporate debt.

Our performance has been relatively strong since the market correction, which started at the beginning of October last year (Fig2) and which we feel is the start of a new era of higher drawdowns and volatility. Although there was a strong equity market recovery in Q1, we still believe that global economic data will deteriorate faster than the consensus, nor do we believe Trump will achieve his goals via tariffs. Q4 was a glimpse of what the equity market could look like without the promise of enduring an ever easier monetary policy and it wasn't pretty. So, in our opinion, as the law of diminishing returns makes central bank intervention increasingly impotent, the need for caution increases and that is the situation we find ourselves in. The funds which are currently dominating the best positions in the performance league tables have been relatively overweight the most expensive geographical sectors and stocks, rather than hope we would be able to exit such positions at an optimum time, we prefer to underweight the most expensive areas of the investable universe.

NB. MPU Figures are calculated on a Total Return basis - Total return shows the total return of the instrument with all income reinvested, assuming income is taxed at basic rates of income tax.

IMPORTANT INFORMATION

Past Performance is no guarantee of future performance. The value of an investment and the income from it can fall as well as rise and investors may get back less than they invested. Quoted yields are based on the 12 months distributions by the funds in the portfolios and are not guaranteed. The past performance figures are from the Model Portfolio Service provided by IBOSS Limited. The same data has been used for IBOSS Asset Management Limited newly launched Discretionary Fund Management Portfolio Service, but with different share classes. The simulated past performance data is not a reliable indicator of future performance. Future distributions may differ and will be subject to market factors. Risk factors should be taken into account and understood including (but not limited to) currency movements, market risk, liquidity risk, concentration risk, lack of certainty risk, inflation risk, performance risk, local market risk and credit risk.
