NOVIA PMS PERFORMANCE UPDATE

FOR PROFESSIONAL FINANCIAL ADVISERS ONLY

Summary

April was a more challenging month for the range as investment style had a significant impact on performance. Many of the growth/tech stocks that had dominated much of 2020 saw an albeit temporary resurgence following a lacklustre start to this year. The situation has, however, already reversed since the beginning of May and more information can be found in our [May Market Update](#). The relative performance figures now look better at the time of writing (please contact your IBOSS BDM, and we would be happy to provide an updated version).

Another critical area of performance, or underperformance, has been an allocation to emerging markets. Asian equities such as Japan, China and India all suffered negative returns against a basket of developed western markets which produced positive returns within a tight band between 3.7% and 3.9% (Fig 1). In short, any allocation away from western developed markets in April acted as a detractor to performance. It is worth noting that China, in particular, contributed significantly to returns in 2020, outperforming the MSCI World by 13%. We believe this is a good demonstration of the diversification benefits of the region at large.

Global Equity Performance April 2021 > 01/04/2021—30/04/2021 (Fig 1)

The portfolio's fixed income allocation held up reasonably well and has contributed to the more robust relative performance of the lower risk end of the portfolio range. On the whole sovereign bonds continue to underperform against a backdrop of future inflation. High yield bonds have performed well, however, they remain extremely expensive relative to history. The outcome of our dual positioning in high-quality credits and shorter duration bonds is an underweight toward sovereign and high yield (junk) bonds. This means that we have participated less in both the worst and the best performing fixed-income instruments.

Some information displayed may be short term in nature to demonstrate performance over a specific time period. Please contact IBOSS for long term data, including since launch and/or 5 years. Past performance is not a reliable indicator of future performance, please refer to our important information on the back page for a full list of risk warnings.
