# CORE MPS PERFORMANCE UPDATE

FOR PROFESSIONAL FINANCIAL ADVISERS ONLY

## Equity: Performance Drivers – Style & Sector

Though the quarter started positively for our Core portfolios and their respective benchmarks, the positive market sentiment faded as we moved into September. Losses then accelerated towards the month's end, resulting in relatively flat returns for the quarter (fig 6). Multiple factors created this increased volatility across asset classes; however, those most acutely affected were funds and portfolios with a bias toward growth.

The growth style has been in favour for much of the last five years, often predicated on the belief that any rise in interest rates was being pushed out even further into the future. The chart below (fig 1) outlines this pattern, as value stocks outperformed growth on a relative basis throughout September, even producing positive returns as the broader market fell.

**Fig 1: Value Vs Growth – 01.07.2021 – 07.10.2021**

The situation becomes more evident when looking at the performance of global equity sectors throughout September (Fig 2), as all international sectors produced negative returns, excluding energy and financials. It is worth highlighting that these two sectors make up a significant portion of the value index but hold relatively small positions within the growth equivalent and the broader market (Fig 3). In short, any allocation to these sectors or styles within the equity portion of a portfolio helped reduce losses coming into September.

**Fig 2: Sector performance through September (01.09.2021-07.10.2021)**

Some information displayed may be short term in nature to demonstrate performance over a specific time period. Please contact IBOSS for long term data, including since launch and/or 5 years. Past performance is not a reliable indicator of future performance, please refer to our important information on the back page for a full list of risk warnings.

## CORE MPS PERFORMANCE UPDATE

FOR PROFESSIONAL FINANCIAL ADVISERS ONLY

**Fig 3: Index Sector Weighting (Largest 10 Value Sectors)**

	MSCI World Value (%)	MSCI World Growth (%)	MSCI World
Financials	24.04	3.90	13.69
Health Care	14.00	11.3	12.61
Industrials	11.33	9.37	10.32
Information Technology	9.00	35.32	22.53
Consumer Staples	8.65	5.22	6.89
Consumer Discretionary	7.18	16.82	12.13
Energy	6.03	0.52	3.20
Utilities	5.30	0.23	2.69
Materials	5.13	3.17	4.12
Communication Services	4.94	13.08	9.13

These points are particularly pertinent for sustainable investors due to the composition of many sustainable funds that favour growth stocks and naturally underweight 'value' areas such as oil & gas and energy. The same points are also relevant for market-cap-weighted, global and North American equity trackers with persistent ever-increasing overweights to technology and growth stocks. Additionally, it is perhaps not surprising that many passive funds have similarly struggled in the same market environment.

### Equity: Performance Drivers – Geography

As we look at the performance of equity markets more broadly, this quarter has seen a continued divergence between emerging and developed markets (fig 4).

One of the widely reported and most significant reasons for this divergence is the underperformance of Chinese equities. This underperformance has had a meaningful impact on the returns of many Asian and emerging markets. However, areas such as India and Russia have produced very positive returns over the same period, 15.08% and 15.49%, respectively.

It is becoming increasingly important when allocating monies to Asia and emerging markets to understand the sectoral makeup of the benchmarks or funds. Furthermore, even in pure investment terms, it is now necessary to include issues such as potential political interference and individual government agendas within an investment case for Chinese and Chinese related stocks.

**Fig 4: Geographical Performance – 01.07.2021 – 07.10.2021**

## CORE MPS PERFORMANCE UPDATE

FOR PROFESSIONAL FINANCIAL ADVISERS ONLY

### Fixed Income: Performance Drivers

As is usually the case, the performance of fixed income instruments had less impact on returns than equities over the quarter (depending on portfolio). That being said, understanding the movements in bond markets is key to predicting future equity movements, and a few points need to be considered both when looking back and extrapolating into the future for likely trends.

Firstly, UK gilts fell 6% from the 5<sup>th</sup> of August following a positive start to the quarter (fig 5). This is an important point as they lost value alongside equities and many multi-asset funds use gilts (and sovereigns more generally) to offset their equity risk. This so-called barbell approach has worked more often than not over many decades. In recent months though, sovereign bonds have sold off simultaneously with growth stocks, so in effect, all the weight is at one end of the barbell.

Secondly, and at the time of writing, all fixed income sectors, excluding high yield, are underwater for the quarter, with high yield up only 0.14% (fig 5). These paltry returns in high yield do not seem sufficient to justify the ongoing risks associated with investing in junk-rated bonds. Our combination of shorter-dated assets, higher credit quality, and selective strategic bond managers have added meaningful outperformance within the fixed income space across the range in Q3.

**Fig 5: Fixed Income Performance – 01.07.2021 – 08.10.2021**

## CORE MPS PERFORMANCE UPDATE

FOR PROFESSIONAL FINANCIAL ADVISERS ONLY

### Performance Summary

Overall in absolute terms, the quarter was slightly positive for the Core range but with a backdrop of increased volatility.

In relative terms, there was slight outperformance for the lower risk portfolios, helped by our sovereign bond underweight position. There was a small amount of underperformance in the medium and higher risk portfolios made up primarily of our overweight position to Asia and emerging markets.

After the current repricing, we believe that these same Asian and emerging markets are more reasonably valued than their US peers. Coming into Q4, we retain these same overweights and overweights to commodities, UK and European stocks. We have been increasing our US exposure via the M&G North American Value fund, which avoids many of the most expensive US assets that remain vulnerable to a change of interest rate policy.
